

Alternative Timelines SOLUTION

1. The card can be organized as an equilateral triangle (5 pictures on each side). Focusing on the left side of the cards, various stories are read from top to bottom, and each story can logically be continued by heading either left or right.
2. The first/top picture is of the hungry boy. The next line has "decide on a dinner" and "decide on a snack". The third line has him thinking of cheese/crackers, pasta, and pizza. The fourth line has a shopping list with crackers, cheese, fresh marinara, and spaghetti to the shopping list. The final line has the crackers in a grocery store, the boy thinking about how his shopping list starts with 'c', the picture of a grocery store cooler, the graphic of a grocery store aisle of dry items, and a person praying to the FSM.
3. After finding the correct layout, use the pictures on the right of each card and index in by the appropriate number in Pascal's Triangle. That gives: ANSWERWORDTWIST. Thus, the solution is "Twist".
