

“NUMBER THEORY” SOLUTION

First shade in all the cells w/ PRIME NUMBERS (numbers in sidebar are a hint).
Then look at one row at a time: it's 5-bit BINARY.

Read shaded cells as “1” and others as “0” to get numbers between 0 and 31.
Turn those numbers into letters using the PP code sheet: 1=A, 2=B, 3=C, etc.
ANSWER: “THE BORG”
