

Grid Walkthrough

Start at the top left corner. Read the answers revealed in the holes left to right. Take note of the four letters in the center of the card, and set aside for now.

Follow the directions from the revealed letters. See the first two PDFed hints. Take note of the four center letters each time.

The instruction in the last card position is "Caesar by thirteen." A Caesar cipher is to replace each letter with a different one a fixed number of places down the alphabet. Remember those four letters in the middle of the card that you recorded but didn't do anything with yet? Shift those letters thirteen places. For example, "A" shifted by thirteen is "N" (A is 1st letter, add 13 to get 14. The 14th letter is N).

You will get the message "Just primes along right edge." Record the letter on the right edge of each prime-numbered row (second, third, fifth, seventh...).
